

Veeam ONE

Veeam ONE ONE solution for VMware management

Veeam ONE is a 2-time Best of VMworld award winner and the 2012 Reader's Choice Award winner for Virtual Management & Optimization from Virtualization Review.

"Though the modern data center has rapidly adopted server virtualization to improve operational efficiency, cut capital costs and ease management, many IT organizations still continue to use monitoring and reporting approaches that were designed for physical environments. Organizations need monitoring and reporting solutions that can take into account the nuances that virtualization introduces."

Cameron Haight

Gartner Research Vice President

vmware
READY

All the components of Veeam ONE have been verified by VMware as VMware Ready.

Veeam is an Elite VMware Technology Alliance Partner and a charter member of the VMware Ready Management program.

Hyper-V support coming soon!

Veeam ONE v6, available in Q2 2012, extends monitoring and reporting to Hyper-V environments.

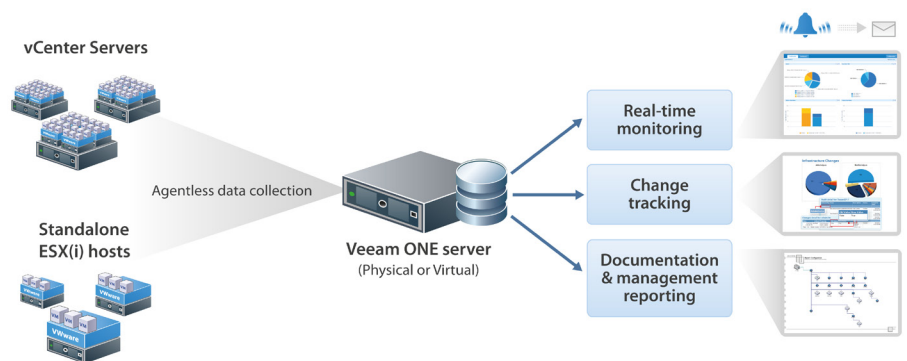

Veeam® ONE™ is a single solution for powerful and easy-to-use VMware management. It provides complete visibility of your virtual infrastructure and affordably delivers the capabilities that matter most to VMware administrators.

Many challenges

As server virtualization has matured, so has the need for effective management of the virtual environment.

- Virtual machines now support mission-critical production workloads.
- IT must document utilization and the business value of virtualization to multiple constituencies, from IT management to executives.
- Resources must be allocated efficiently, and VM sprawl must be brought under control.

Veeam Software addresses these challenges and more with Veeam ONE, a comprehensive and affordable solution that provides complete visibility of your VMware environment.

Veeam ONE is a single, easy-to-use and powerful solution for managing multiple vCenter Servers and standalone hosts, including those running free vSphere Hypervisor.

Powerful and proven technology

Veeam ONE combines the power of Veeam Monitor™, Reporter™ and Business View™—proven tools used by more than 50,000 VMware professionals. With Veeam ONE, you can manage your increasingly complex and mission-critical VMware environment with a solution from Veeam, the recognized leader in virtualization management and data protection.

An affordable solution

Veeam ONE delivers an integrated, comprehensive solution at a competitive per-socket price. Watch your ROI grow as you leverage the power of effective virtualization management to improve application performance and availability, allocate resources more efficiently and increase consolidation ratios.

Advanced alarm capabilities

Thresholds for Veeam ONE's pre-built alarms are best-practices values based on years of experience and advanced analysis. Because these values might not always fit your needs, Veeam ONE lets you change the threshold for any alarm. You can then model the alarm against past performance data to understand the effect of your change and to prevent inadvertent alert storms, missed events and other possible problems.

In addition to over 125 pre-built alarms, you can create custom alarms for events that are unique to your virtual environment. With Veeam ONE, you can enjoy the confidence of knowing you're on top of all the events that are important in your environment.

Built-in intelligence

Veeam ONE discovers your virtual environment and delivers out-of-the-box capabilities that let you immediately experience the benefits of effective virtualization management. With features that include:

- Automatically triggered data collection
- Pre-built alarms
- Extensive knowledge base for root cause identification and troubleshooting

you'll be satisfied with a solution that is easy to use and powerful, all in ONE.

Fight VM sprawl

Veeam ONE identifies unused and unmanaged virtual machines.

It also provides utilization information that administrators can analyze and business users can factor into chargeback calculations. By ensuring applications are both justified and accountable, Veeam ONE is an effective partner in the fight against VM sprawl.

Supported environments

Platforms:

- vSphere 5.0 and 4.x
- VMware Infrastructure 3.x (VI3)

Hosts:

- ESX 4.x and 3.5
- ESXi 5.0, 4.x and 3.5
- vSphere Hypervisor (free ESXi)

Software:

- vCenter Server 5.0 and 4.x (optional)
- Virtual Center 2.5 (optional)

Veeam ONE business categorization requires vCenter Server (any version listed above).

Real-time monitoring

Veeam ONE provides real-time, well-informed and unattended 24x7 monitoring of your entire virtual infrastructure. Rely on Veeam ONE to:

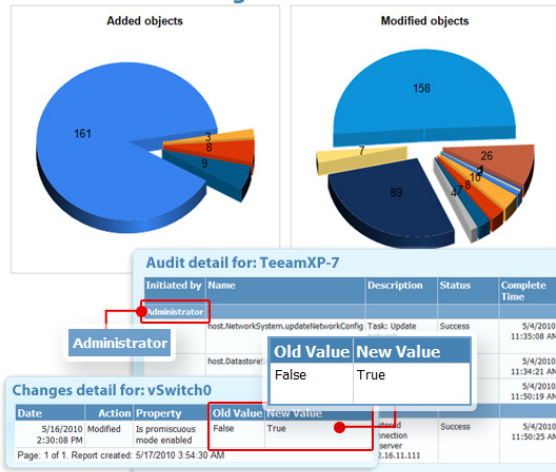

- Alert you of performance issues before applications and users are affected
- Speed problem resolution with built-in intelligence and easy access to diagnostic data
- Optimize resource configuration and utilization to achieve the highest levels of performance and availability

Veeam ONE monitors your virtual environment agentlessly and consolidates data collection across users to eliminate unnecessary load on vCenter Servers and ESX(i) hosts. You get maximum visibility of your virtual infrastructure with minimum overhead.

Change tracking

The virtual infrastructure is highly dynamic. Changes can come from administrators or vSphere itself, and these changes can have a significant impact on performance. To facilitate troubleshooting, change auditing and forensic analysis, Veeam ONE provides complete change tracking for VMware—the who, what, when, where and how of every change in your virtual environment.

Infrastructure Changes

Veeam ONE keeps a complete historical record, including before and after values, of hundreds of VMware change events, so you can troubleshoot and, if necessary, quickly restore settings when a change has unexpected consequences.

Documentation and management reporting

Compliance and common sense dictate that you document the structure and state of your virtual infrastructure. Instead of trying to capture and record scores of settings for hundreds or thousands of objects, let Veeam ONE automatically discover and document your infrastructure for you. It inventories and diagrams the environment, and it provides a backup of all your settings so you can restore your environment if something gets corrupted or deleted.

Veeam ONE makes it easy to create the reports you need for the information your organization requires. With a wealth of pre-defined reports that can be generated automatically and delivered to dashboards, email, web portals and folders, you can be sure reports are compiled correctly, consistently and on time, every time.

Business categorization

Veeam ONE enables both technical- and business-oriented views of the virtual infrastructure. Automatically group hosts, clusters, virtual machines and datastores into categories based on business unit, geographic location, department, service level, server type or any other criteria you define.

Because Veeam ONE is an integrated solution, you can then manage, view and report on your resources according to your groups. Experience the benefits of managing to business priorities and providing stakeholders with the information they need, without spending hours or days compiling data.
